Security Advisory PHP Vulnerability Update

Note
Access the live announcement here.

We're aware of the recently reported security vulnerability affecting certain PHP-based applications and platforms. After reviewing the issue, we can confirm that **OnePlan is not affected**, and **no customer action is required**.

What We Found

OnePlan does not utilize PHP within our application or supporting cloud infrastructure. Because the vulnerability specifically impacts PHP-based environments, it does not apply to the OnePlan platform.

Key Takeaways

- ✅ **No impact to OnePlan** applications or services
- ✅ **No impact to customer data or environments**
- ✅ **No configuration changes or remediation required**
- ✅ **No customer action needed**

Our Commitment to Security

Protecting customer data remains a top priority at OnePlan. Our security and vulnerability management program continuously monitors emerging threats, assesses potential risks, and ensures our platform remains secure, reliable, and resilient.
